Gareth

By implication a being on the RER suggests that it is not a PinICL but a design change to Escher code - so suggest you do indeed close the PinICL with a text that indicates it is on RER and that Escher code is working as they designed it!

Mark,

Please can you have a look through the 7 PinICLs in the list assigned to you. I suspect that many of them can either be closed or "Parked". I can supply you with more details about them if you have problems in getting through to PinICL.

Brian / Chris: The one assigned to me has now been moved to Parked. It is on the RER as a "nice to have". I could close it if that is thought more appropriate.

Regards

Gareth
